BATCH UPDATE OF EOR PROJECT DATA BASES

By J. F. Pautz, R. J. Heemstra, and C. A. Sellers

SUMMARY

NIPER supports the DOE Tertiary Oil Recovery Information System (TORIS) for the Bartlesville Project Office (BPO) by maintaining two active data bases on EOR projects. One is maintained in the computers of the Energy Information Administration in Washington, D.C., under the System 2000 (S2K) data base management system, and the second is in a local Concurrent computer at the BPO under the RELIANCE data base management system. The local data base, PROJ, was activated in 1987, and the management support system is still being developed.

The RELIANCE data management routines do not allow batch editing of data in PROJ. New data can be added by appending the new data to existing files, but revising existing data requires displaying and revising each data record in an interactive mode. When numerous records are being edited, data entry is time-consuming, and there is a risk of undetected input errors. S2K does allow updating of data records in a batch mode so that numerous changes can be made quickly from data files that have been reviewed for input errors.

The BPO requested two changes: (1) correction of numerous date errors and standardization of the date format and (2) update project status and the status date. Since these two requests would require the correction of roughly 3,600 record elements, a method to assure proper data updating into PROJ was needed. Specially written application programs for these changes could enable cost-effective updates and allow assurances of proper updating of PROJ. These application programs have been written and run. Audit reports generated by these application programs present in detail the input data values and the previous data values, and the values in the revised data file have been prepared and are presented in appendices to this report.

The date errors (item 1 in the previous paragraph) were corrected in the corresponding S2K files during the fall of 1987. The project status data (item 2) were corrected in February 1988.

The BPO is considering possible directions for future development of the EOR Project Data Base. One potential direction is a fourth generation language for RELIANCE. This language would include a simple and general method to update the data base in a batch mode. Because of this possibility, NIPER will not write a general updating application program.

BATCH UPDATING

The BPO found numerous errors in the data elements shown in table 1. These were errors made when items were originally transcribed from form 424A, "Report for EOR Incentives Program," into the S2K data base. During the initial development of the S2K data base, the format for these related dates was not a standard date format but a string format. This resulted in dates being entered in both mm/yyyy and yyyy/mm formats. This input inconsistency was resolved by converting all dates to the yyyy/mm format.

TABLE 1. Identification of S2K and RELIANCE (PROJ) elements in one of the updating applications programs.

S2K Element No.	PROJ Position No.	S2K Data Dictionary Name	PROJ Data Dictionary Name
C540	066	LAB-ENGR-DESIGN-BDATE	LAB-DESIGN-BDATE
C454	067	LAB-ENGR-DESIGN-EDATE	LAB-DESIGN-EDATE
C550	068	WORKOVER-DRILLING-BDATE	WELLWORK-BDATE
C555	069	WORKOVER-DRILLING-EDATE	WELLWORK-EDATE
C560	070	SEQUIP-INSTAL-BDATE	SURF-EQUIP-BDATE
C565	071	SEQUIP-INSTAL-EDATE	SURF-EQUIP-EDATE
C570	072	PREFLUSH-BDATE	PREFLUSH-BDATE
C575	073	PREFLUSH-EDATE	PREFLUSH-EDATE
C580	074	TER-FLUID-INJ-BDATE	EOFLD-INJ-BDATE
C585	075	TER-FLUID-INJ-EDATE	EOFLD-INJ-EDATE
C590	076	INCR-RESPONSE-BDATE	INCR-RESPN-BDATE

BPO prepared a data file that detailed the transcribing errors found. This data file was modified last fall to update the S2K EOR Project Data Base. To make sure that the new PROJ data base mirrors the S2K data base, the data elements were downloaded to a new input file for PROJ.

A special RELIANCE application program was written to update PROJ. First, the program checked the format in the downloaded file from S2K to generate a

new input file with the new format. From this, new input file changes were made to the PROJ-RSV-INFO DMS file and the DMS file with the updated data elements, and a temporary DMS file was created. Next, an audit report was produced detailing the changes. The audit report was used to confirm all input values by printing, by project number, the BPO input values, the new input values with the yyyy/mm format, the old current values, and the new updated values. When the updated values were confirmed to be the desired values, the temporary file replaced the appropriate records in the existing DMS file. The audit report detailing the 2,745 changes to PROJ position numbers 066 to 076 is in appendix I. When the audit report was reviewed, position number 069 was discovered missing from the initial population of PROJ. The steps used for this update properly populated position 069 of PROJ.

A second application program was written to update the PROJ-STATUS-CODE (Position No. 049) and PROJ-STATUS-YEAR (Position No. 050) in the PROJ-RSV-INFO DMS file with data from the BPO and to generate an audit report. The additions never existed in PROJ so no editing was performed. A new QUERY called PRJ-STATUS was written to confirm the proper input of data in an interactive mode. We added 853 new values to PROJ and made the corresponding changes to S2K Element Numbers C446 and C447. The changes are listed in appendix II.

CONCLUSIONS

Specific applications programs have been written to update specific dates and status in the PROJ-RSV-INFO DMS file of PROJ. Although these programs will likely be used only one time, they will allow rapid generation of additional applications programs for future updates. A general updating application program is not recommended at this time.
